1 Introduction

This module will explain, how to use maths symbols and expressions.

1.1 Math Formulas

Mathematical expressions can be created inline as $5 * 4 = 20$, can include a number of different math symbols, such as $7 \leq 10$ is true.

1.2 Float:Equations

My first result is shown in Equation 1, which shows the number of in a day.

$$24 * 60 = 1,440 \tag{1}$$

There are a lot of interesting math symbols that I can learn, as shown in Equation 2

$$7^4 + 6 * 17 \geq 13 \cup X \alpha 13 \exists \rightarrow \textit{nonsense} \tag{2}$$

2 Conclusion
